Starting from $2^{6}$ find a route to the opposite side of the rectangle so that each value you land on is equivalent to $2^{6}$.

You may only move one space horizontally or vertically each time - no diagonal moves allowed!

| $2^{6} \times 2^{3}$ | $3^{2} \times 2^{3}$ | $(\sqrt{ } 16)^{2}$ | $\left(2^{3}\right)^{3}$ | $8^{3} \div 8$ | $4^{4} \times 4^{-3}$ | $(\sqrt[3]{8})^{4}$ | $8 \times 4^{2}$ |

## Teacher notes

Content: Evaluating surds
Possible uses:

- As an extension task for more able pupils: e.g. if they haven't yet encountered a negative index
- As a task to identify misconceptions: some common misconceptions are targeted and will lead to an incorrect route
- As a consolidation task

## Resource options:

- PowerPoint file for whole class projection
- Worksheet for individual pupils

## Answers

|  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\left(2^{3}\right)^{2}$ | $8^{7} \times 8^{-5}$ | $4^{3}$ |  |  |  |  |
| $2^{6}$ | $(\sqrt{64})^{2}$ |  | $(\sqrt{16})^{3}$ |  | $8^{3} \div 2^{3}$ |  |  |
|  |  |  | $4^{5} \div 2^{4}$ |  | $\left(2^{2}\right)^{3}$ |  |  |
|  |  |  | $2^{3} \times 8$ | $2^{-1} \times 2^{7}$ | $\left(\frac{1}{4}\right)^{-3}$ |  |  |

NB there are a few other expressions on the grid that are also equivalent to $2^{6}$ but none are connected to the route as a 'legal' move.
